1 Document Overview

1.1 Introduction

This document serves as the Software Test Plan for **“myVisit” mobile app Version 3.6.3.**

The purpose of this STP is to define the framework and Strategy for the testing of “myVisit” mobile app.

The plan is tailored to support the Agile Scrum methodology, emphasizing on flexibility and iterative development.

Our objective is to validate the High Quality of “myVisit” mobile app.

We will verify “myVisit” mobile app behaves as expected by testing its features and functionality.

In alignment with Scrum principles, this document will try to stay as short and focused on Testing needs so it could be easily updated and evolve throughout project iterations.

1.2 Objectives

At a high level, The primary objectives of this Software Test Plan for "myVisit" mobile app are as follows:

✓ **Ensure Product Quality:**

To uphold the high standards of quality for which "myVisit" is known, verify that all features work as intended and meet user and business requirements.

✓ **Enable Efficient Development Cycles:**

To align testing activities with Scrum sprints, facilitating swift identification and resolution of defects and supporting the development team in quick iterations.

✓ **Support Business Goals:**

To ensure that the testing process aligns with the overarching business objectives, contributing to the sustained success and growth of "myVisit".

1.3 Scope

- The scope of this document is only for version 3.6.3 of "myVisit" product.
- This STP won't include the Test Planning and Test Execution of "myVisit" on the following OS: Linux, MacOS

1.4 References

<If applicable you can list here any reference you have about the specification of the product like tuturials / User Manuals / SRS etc'.
In case there's none you can state that No references were available e.g. "N/A">

No	Document Title	File Name (Path) / HyperLink

2 Scope of testing

2.1 Features to be tested

- התחברות
- התחברות ללא הרשמה
- קביעת תור וביטול תור
- אייקון חזרה לדף הבית
- אייקון ניווט (דרך Waze)
- מיון ספקי שירות לפי כל מיני מסננים
- תפריט צד
  - תכנון ביקור חדש
  - הביקורים שלי
  - עדכונים
  - הגדרות (SMS, אימייל, שפה, מדינה, מזהי לקוח, יח' מרחק)
  - אודות myVisit

2.2 Features not to be tested

- נגישות (לא ראיתי לחצן של נגישות)

2.3 Testing Types

Outlined below are the test types that will be planned and performed during this project:

- **Functionality Testing:**

  To ensure all features of “myVisit” such as making an appointment, canceling an appointment, Filters, and tabs, operate as intended.

- **Usability Assessment:**

  To evaluate the user interface for intuitiveness and ease of use.

  This includes ensuring the app is easily navigable and that the interface elements are responsive to user interactions.

- **Interface Testing:**

  Ensure that the interface with the various applications and bodies works as expected.

- **Localization Testing:**

  Verify that it is possible to change the language in the application and/or schedule appointments for entities in different countries.

- **Error Handling**

2.4 Test Strategy and Approach

Our test approach is systematic and structured to ensure thorough and efficient validation of each build received from the Development team.

The following outlines our planned testing progression for each release cycle:

Initial Build Assessment with Smoke Testing:

Upon receipt of a new build, the Quality Assurance (QA) team will execute a Smoke Testing Suite.
This suite is designed to quickly check the stability of the build and ensure that the core functionalities of Google Search are operating as expected.

Only after a build passes the smoke test will it move forward in the testing process.

Focused Testing on New Features and Bug Fixes with Sanity Testing:

After the build has passed the Smoke Testing phase, the QA team will proceed to Sanity Testing.
This phase is targeted at the new features and bug fixes included in the release.

The objective is to ensure that specific updates are functioning correctly in the application without any immediate issues.

Comprehensive Regression Testing:

Following the Sanity Testing phase, comprehensive Regression Testing will be conducted.
This is critical to ensure that new code changes have not adversely affected existing functionalities of Google Search.

The Regression Testing will be extensive and is designed to cover all areas of the application that could potentially be impacted by the changes.

Incorporation of Exploratory Testing:

Parallel to the structured testing phases, we allocate approximately 20% of the total testing effort during the execution phase for Exploratory Testing.

This approach allows testers to go beyond predefined test cases and scenarios, using their insights and experience to uncover issues that may not have been anticipated in the test planning stages.

Iterative Feedback and Continuous Integration:

The testing strategy is aligned with the Agile Scrum framework, which advocates for continuous integration and iterative feedback.

Testing phases will be tightly integrated with the sprint cycles, ensuring prompt feedback to the Development team and allowing for quick iteration and refinement of the application.

The proposed testing approach ensures a balance between structured testing and the flexibility to discover unforeseen issues, making it highly effective in an Agile development environment.

By following this approach, the QA team contributes to the delivery of a stable, high-quality product that meets the rigorous standards expected of Google Search.

3 Planed Smoke Test for “myVisit”

The following section will contain specific test cases (positive\negative\boundary) per module.

3.1 Test objectives

To guarantee that the new build is ready for comprehensive testing.

#	Step	Expected Result	Actual Result
1.	Enter "https://www.google.com" in the browser address bar.	Google Search homepage loads without errors.	
2.	Input 'test' into the search bar and press 'Enter'.	Search results for 'test' are displayed.	
3.	Use voice search functionality by clicking the microphone icon.	Voice search activates, and spoken search executes correctly.	
4.	Click on the 'Sign In' button.	Redirects to the Google account sign-in page.	
5.	Perform a search and then click on a search result.	The selected search result opens in a new tab or window.	
6.	Access the homepage using a different browser.	The homepage loads and functions correctly on different browsers.	
7.
