1 Document Overview

1.1 Introduction

This document serves as the Software Test Plan for "**Booking.com**" website **Version 10.23.1**.

The purpose of this STP is to define the framework and Strategy for the testing of "Booking.com" web site.

The plan is tailored to support the Agile Scrum methodology, emphasizing on flexibility, and iterative development.

Our objective is to validate the High Quality of "Booking.com" web site.

We will verify that the "Booking.com" web site behaves as expected by testing its features and functionality.

In alignment with Scrum principles, this document will try to stay as short and focused on Testing needs so it could be easily updated and evolve throughout project iterations.

1.2 Objectives

At a high level The primary objectives of this Software Test Plan for Booking.com are as follows:

✓ **Ensure Product Quality:**

To uphold the high standards of quality for which Booking.com is known, verifying that all features work as intended and meet user and business requirements.

✓ **Enable Efficient Development Cycles:**

To align testing activities with Scrum sprints, facilitating swift identification and resolution of defects, and supporting the development team in quick iterations.

✓ **Support Business Goals:**

To ensure that the testing process aligns with the overarching business objectives, contributing to the sustained success and growth of Booking.com

1.3 Scope

- The scope of this document is only for version 10.23.1 of “Booking.com” product.
- This STP won’t include the Test Planning and Test Execution of “Booking.com” on the following OS: Linux, MacOS

1.4 References

<If applicable you can list here any reference you have about the specification of the product like tutorials / User Manuals / SRS etc'.
In case there's none you can state that No references were available e.g. "N/A">

No	Document Title	File Name (Path) / HyperLink

2 Scope of testing

2.1 Features to be tested

Here you'll state all the Modules Features you plan to test.

<Note that because its evolving document that some features/Modules could be added / deleted while the project is on process depends on timetables and complexity>

- הרשמה - בתיה
- כניסה לחשבון - בתיה
- תכנית נאמנות - Genius - בתיה
- הזמנת אירוח בחו"ל - קרינה
- השכרת רכב + הצעות מיוחדות - קרינה
- מוניות מ/אל שדה התעופה - קרינה
- אטרקציות - וידא
- החשבון שלי -> להשלמת הפרופיל -> התאמה אישית + אמצעי תשלום + ניהול מידע ופרטיות - זיוה
- תמיכה - זיוה
- בחירת שפה (אייקון דגל ישראל) - זיוה
- בחירת מטבע (אייקון) - (LS)זיוה
- החשבון שלי -> להשלמת הפרופיל -> פרטים אישיים + הגדרות אבטחה + נוסעות ונוסעים אחרים - מירב
- הזמנת אירוח בארץ - פזית
- טיסות (בארץ + בחו"ל) - ספי

2.2 Features not to be tested

- כדאי להכיר
- תנאים והגדרות
- שותפים
- מידע עלינו
- הצעות מיוחדות
- נגישות

2.3 Testing Types

- **Smoke Testing**

We are going to register on a booking website and book a vacation in Israel.

We are going to use functionality-positive tests and interface tests.

2.4 Test Strategy and Approach

Our test approach is systematic and structured to ensure thorough and efficient validation of each build received from the Development team.

The following outlines our planned testing progression for each release cycle:

Initial Build Assessment with Smoke Testing:

Upon receipt of a new build, the Quality Assurance (QA) team will execute a Smoke Testing Suite.

This suite is designed to quickly check the stability of the build and ensure that the core functionalities of Google Search are operating as expected.

Only after a build passes the smoke test will it move forward in the testing process.

Focused Testing on New Features and Bug Fixes with Sanity Testing:

After the build has passed the Smoke Testing phase, the QA team will proceed to Sanity Testing.

This phase is targeted at the new features and bug fixes included in the release.

The objective is to ensure that specific updates are functioning correctly in the application without any immediate issues.

Comprehensive Regression Testing:

Following the Sanity Testing phase, comprehensive Regression Testing will be conducted.

This is critical to ensure that new code changes have not adversely affected existing functionalities of Google Search.

The Regression Testing will be extensive and is designed to cover all areas of the application that could potentially be impacted by the changes.

Incorporation of Exploratory Testing:

Parallel to the structured testing phases, we allocate approximately 20% of the total testing effort during the execution phase for Exploratory Testing.

This approach allows testers to go beyond predefined test cases and scenarios, using their insights and experience to uncover issues that may not have been anticipated in the test planning stages.

Iterative Feedback and Continuous Integration:

The testing strategy is aligned with the Agile Scrum framework, which advocates for continuous integration and iterative feedback.

Testing phases will be tightly integrated with the sprint cycles, ensuring prompt feedback to the Development team and allowing for quick iteration and refinement of the application.

The proposed testing approach ensures a balance between structured testing and the flexibility to discover unforeseen issues, making it highly effective in an Agile development environment.

By following this approach, the QA team contributes to the delivery of a stable, high-quality product that meets the rigorous standards expected of Google Search.

3 Planed Smoke Test for “Booking.com”

The following section will contain specific test cases (positive\negative\boundary) per module.

3.1 Test objectives

To guarantee that the new build is ready for comprehensive testing.

#	Step	Expected Result	Actual Result
1.	Enter "https://www.moodon.com" in the browser address bar.	Google Search homepage loads without errors.	
2.	Input 'test' into the search bar and press 'Enter'.	Search results for 'test' are displayed.	
3.	Use voice search functionality by clicking the microphone icon.	Voice search activates, and spoken search executes correctly.	
4.	Click on the 'Sign In' button.	Redirects to the Google account sign-in page.	
5.	Perform a search and then click on a search result.	The selected search result opens in a new tab or window.	
6.	Access the homepage using a different browser.	The homepage loads and functions correctly on different browsers.
